

# PROJECT REPORT

“Online Voting System”

**Guided By:**  
Ms. Shilpa Mam

**Submitted By:**  
Rishabh Kumar  
Enrolment No: 166764004

## **TITLE OF THE PROJECT**

“Online Voting System”

## **PROJECT CATEGORY**

“Online Voting System” is an Enterprise Resource Planning. It is a web based application. It can be accessed using a browser e.g. Chrome and Internet Explorer etc.

**Guided By:**

Ms. Shilpa Pathak

**Submitted By:**

Rishabh Kumar  
E.No: 166764004

## **Abstract**

The Project is developed for the threat free and user oriented Online Voting System. The Online Voting system is made for the people of the country residing around the world and wants to vote for their representative. The election can be conducted in two ways the paper ballot election and the automated ballot elections.

The automated ballot elections are called the electronic voting. The online voting system is highly developed and the online polling system can be replaced by accurately and directly voting online and immediate results. The system Administrator registers the voters on a special site of the system visited by him only by simply filling a registration form to register voter.

After registration, the voter is assigned a secret Voter ID with which he/she can use to log into the system and enjoy services provided by the system such as voting.

## **Acknowledgement**

I express my Gratitude to Ms. Shilpa Pathak for his help, guidance throughout the work for this project without which I would not have been able to complete this project to such a success.

I would also like to thank my classmates who helped me directly or indirectly in accomplishing this work

Finally I would also like to thank other faculty members who provided me with Moral support during the course of this project.

## **Introduction**

**“ONLINE VOTING SYSTEM”** is an online voting technique. In this system people who have citizenship of India and whose age is above 18 years of age and any sex can give his\her vote online without going to any physical polling station.

There is a database which is maintained in which all the names of voters with complete information is stored. In “ONLINE VOTING SYSTEM” a voter can use his\her voting right online without any difficulty. He\She has to be registered first for him/her to vote.

The system Administrator registers the voters on a special site of the system visited by him only by simply filling a registration form to register voter.

Citizens seeking registration are expected to contact the system administrator to submit their details. After the validity of them being citizens of India has been confirmed by the system administrator by comparing their details submitted with those in existing databases such as those as the Registrar of Persons, the citizen is then registered as a voter. After registration, the voter is assigned a secret Voter ID with which he/she can use to log into the system and enjoy services provided by the system such as voting. If invalid/wrong details are submitted, then the citizen is not registered to vote.

## **Objective**

The main objectives of system for Online voting system are:

- ✓ The objective of Online voting system is to help the organization in automating the whole manual processing of the existing system.
- ✓ The main objective to develop the system is to make the accurate & efficient decisions in different tasks at different time at different situations. The existing system is manual so members of the unit generally face a lot of embarrassing situations many times. Now they need to automate the whole process so as to make it more easy and accurate.
- ✓ System should support multi-user environment.
- ✓ System should be fully automated.
- ✓ System should provide concrete security features like creating users and assigning privileges to users of the system.
- ✓ System should be capable to keep track of all the detailed descriptions of the client and the whole details of services offered by the client organization.
- ✓ Various outputs (reports) should be available online any time.

## **Project category**

ERP Stands for "Enterprises Resource Planning."

ERP is a Business management software. It is a suite of integrated application that helps users to store and manage data of their business.

One of the most important activities associated with the implementation of an ERP system is the opportunity to streamline and improve the business operations of an organization through business process re-engineering and the by implementing the best practices and standards.

An ERP system is easily scalable so adding new functionality according to the business plan is very easy.

It helps to helps make reporting easier and more customizable.

### **❖ Front End**

✓ HTML, CSS, JavaScript,Bootstrap .

### **❖ Back End**

✓ JSP, Servelt, MySQL, JDBC.

## **Modules of online voting system**

### **❖ Candidates**

- ✓ The system must allow a candidate for login or logout.
- ✓ The system must allow a candidate to add poll.
- ✓ The system must allow a candidate to add their vote.
- ✓ The system must allow a candidate to check final result.

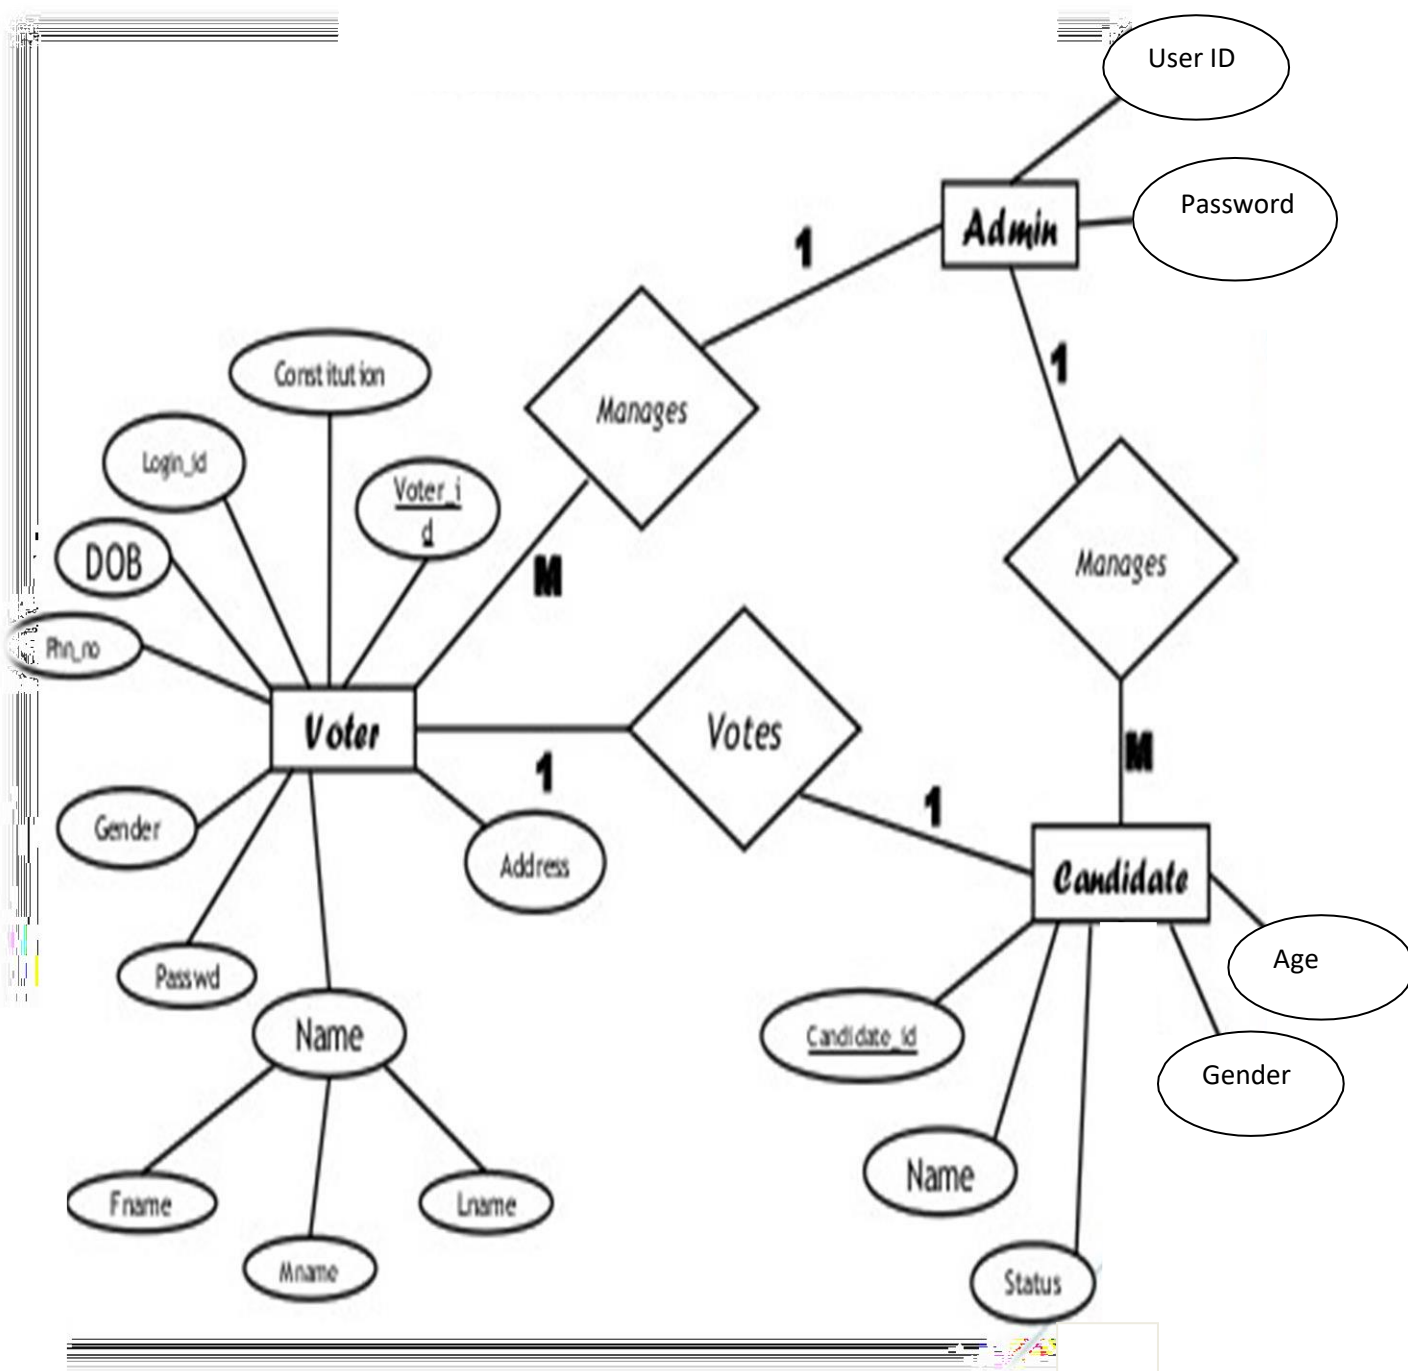

### **❖ Voter**

- ✓ The system must allow a voter to get a new registration.
- ✓ The system must allow a voter for login or logout.
- ✓ The system must allow a voter to release their vote.
- ✓ The system must allow a voter to check final result.

## ❖ **Admin**

- ✓ The system must allow an admin for login or logout.
- ✓ The system must allow an admin to add new candidates.
- ✓ The system must allow an admin to view the details of candidates.
- ✓ The system must allow an admin to view the details of voter.
- ✓ The system must allow an admin to check the duplicate redundancy about the polls.
- ✓ The system must allow an admin to declare final result.
- ✓ The system must allow an admin to generate the report.

## E.R. Diagram

## Schema Table

**Admin Table:-**

Field Name	Data Type	Description
Username	Varchar	Login id for Admin.(Primary key)
Password	Varchar	Password for Login

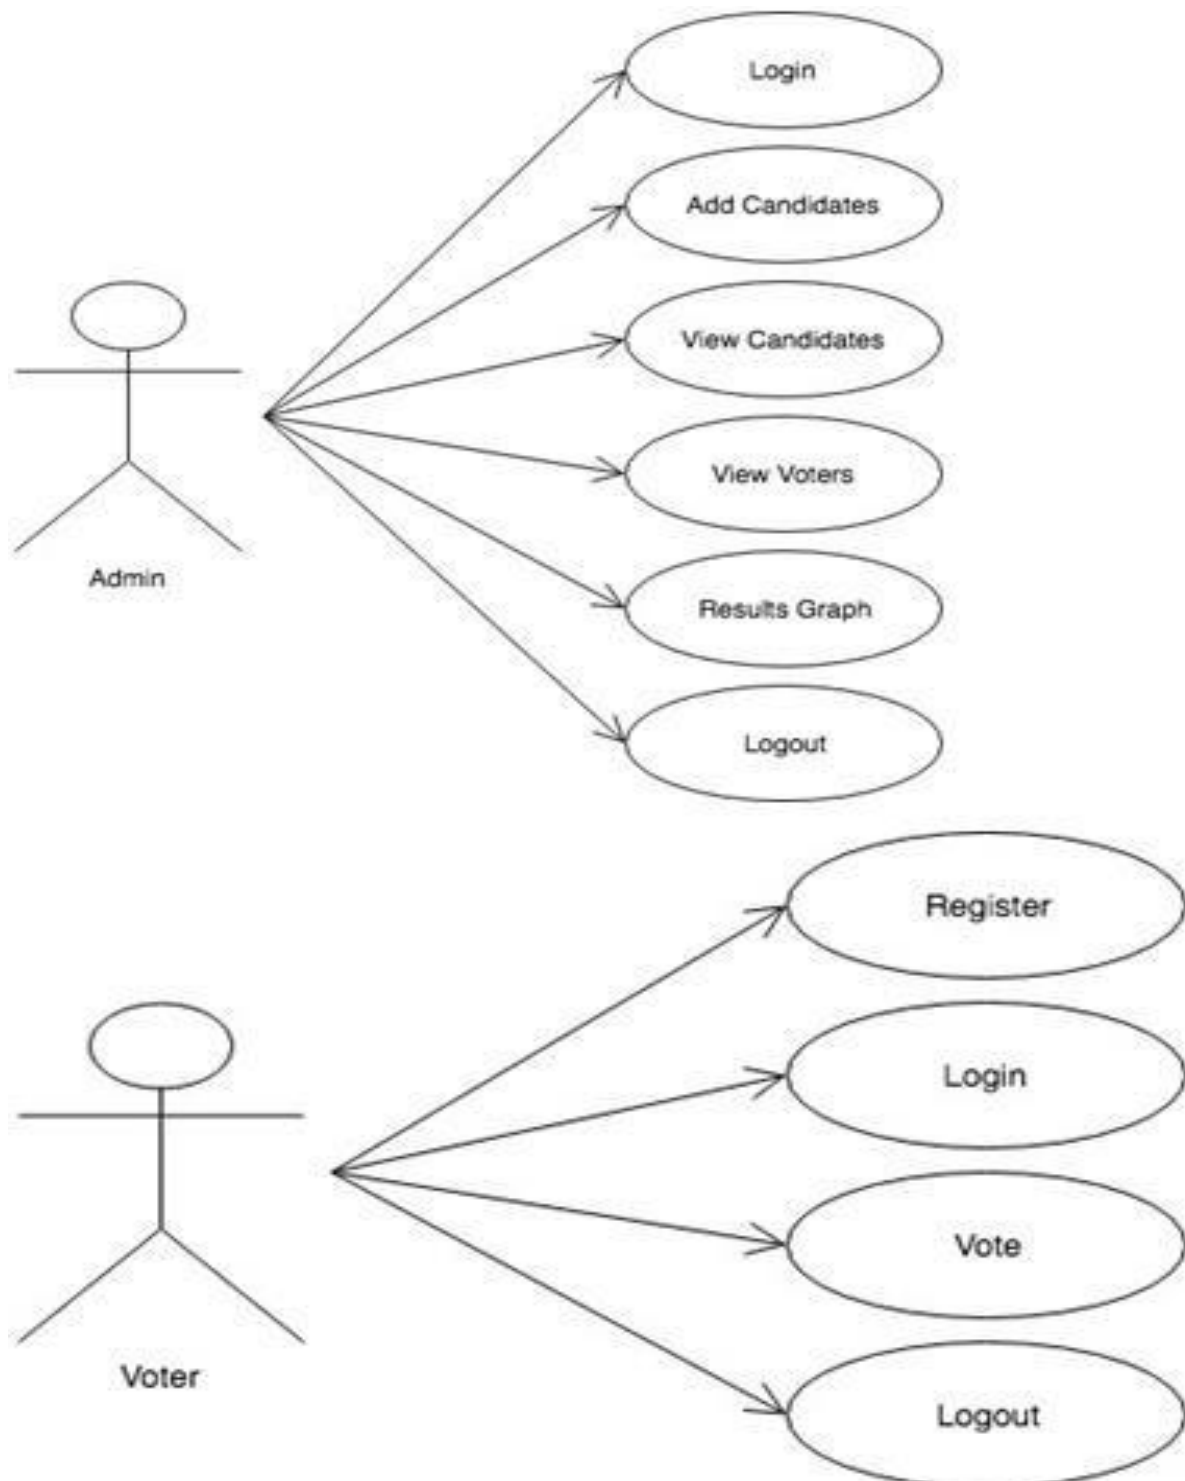

**Voter Table:-**

Field Name	Data Type	Description
VoterId	Integer	Login id for Voter(Primary key)
Name	Varchar	Name of the voter
Sex	Varchar	Sex of voter
Age	Integer	Age of voter
City	Varchar	City of voter
Security	Varchar	Security Question
Status	Boolean	Status of voter(he/she can vote or not)

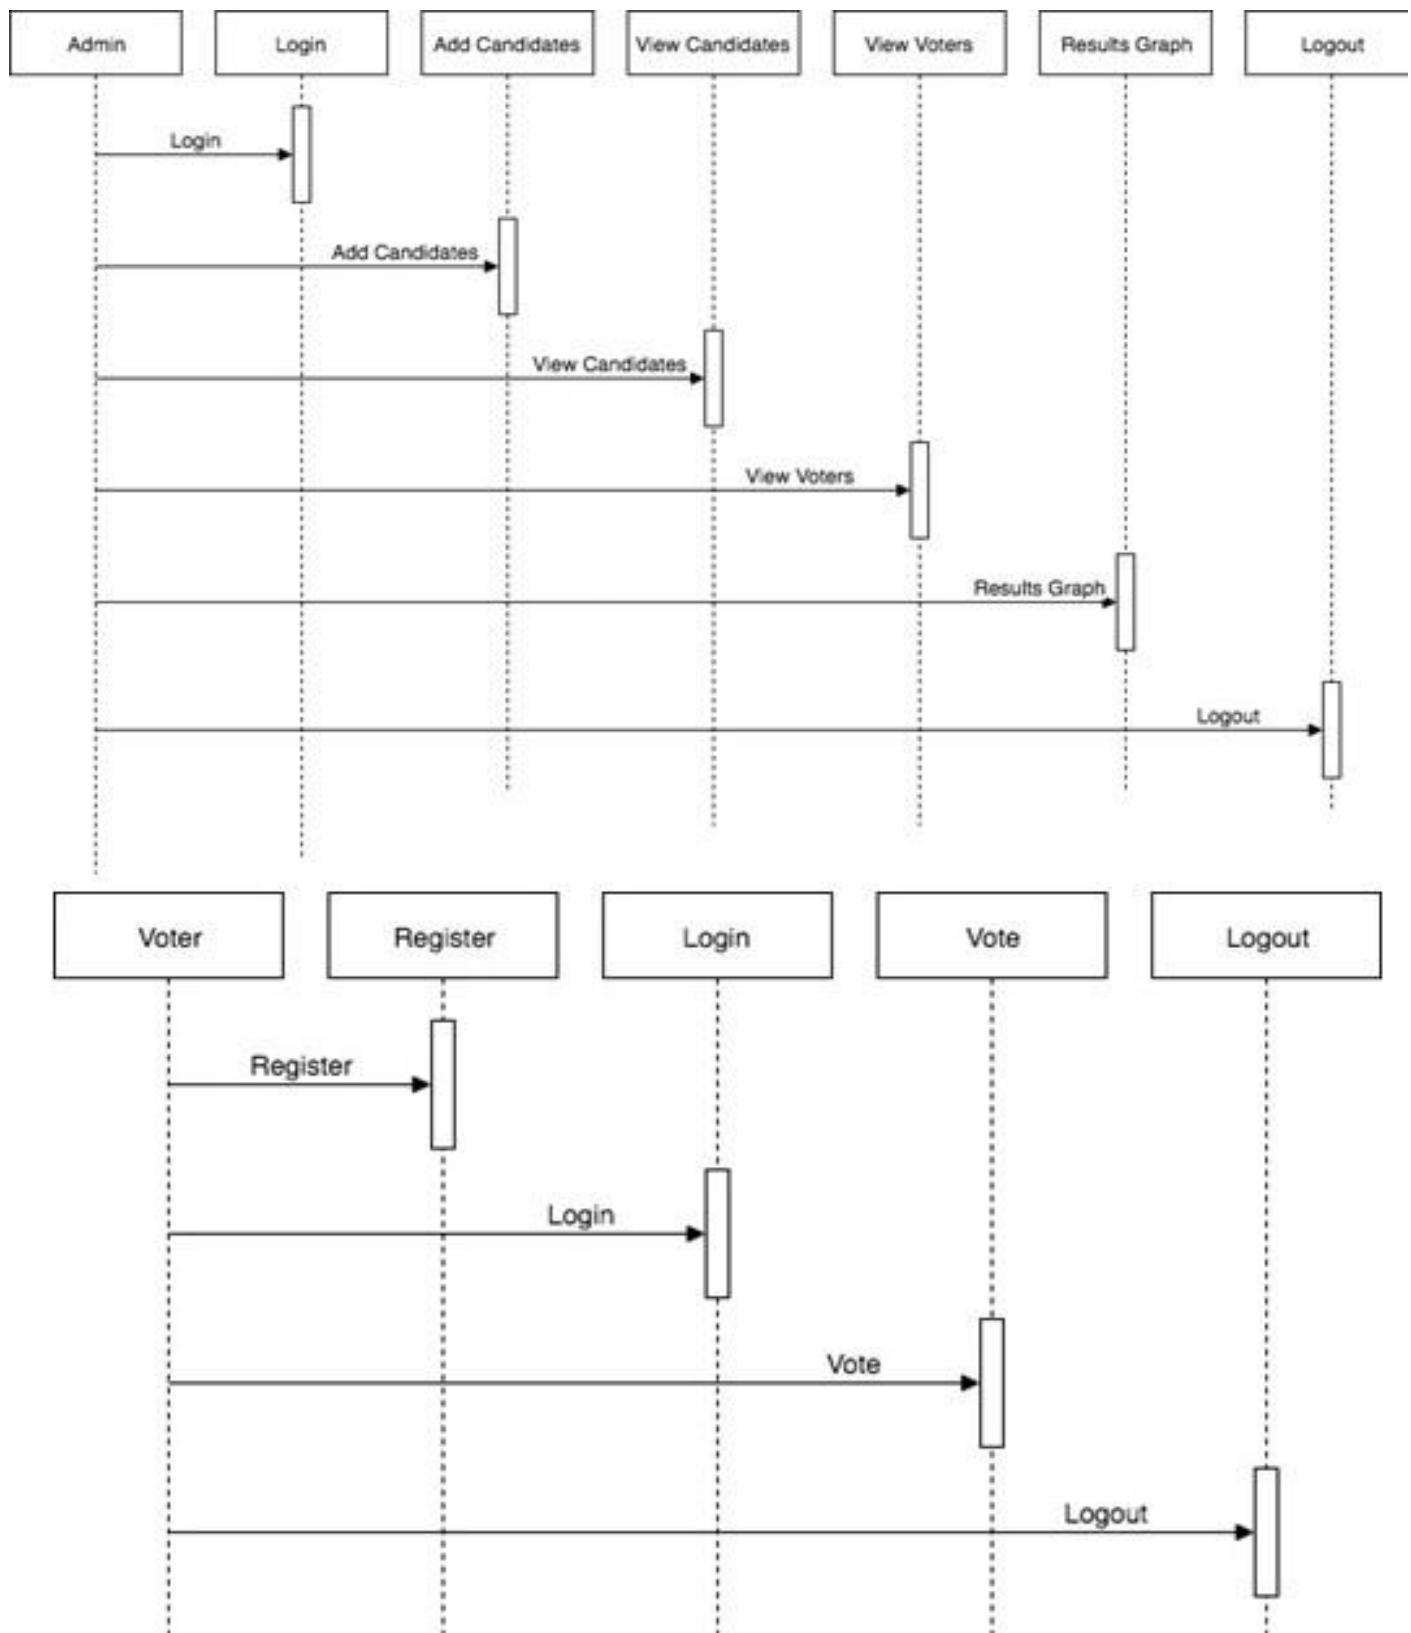

**Candidate Table:-**

Field Name	Data Type	Description
Symbol	Varchar	Party Symbol (Primary key)
Name	Varchar	Name of the voter
Sex	Varchar	Sex of voter

### Zero Level DFD

### First Level DFD

## Second Level DFD

# **Requirements**

## **❖ Hardware Requirements Specification**

- ✓ **Processor** : Intel Pentium processor 500 MHz or faster.
- ✓ **Speed** : 2.4GHz
- ✓ **Ram** : Minimum 2 GB.
- ✓ **H.D.D** : Minimum 40GB or above.

## **❖ Software Requirements Specification**

- ✓ **Operating System** : Window 10
- ✓ **IDE** : Net beans.
- ✓ **Web Browser's** : Google chrome.
- ✓ **Server** : Apache Tomcat,Glassfish

## **Tools And Platform Used**

### ❖ **Front End**

✓ HTML, CSS, JavaScript, Bootstrap.

### ❖ **Back End**

✓ JSP, Servlet, MySQL, JDBC .

## **Testing**

A unit test is a way of testing a unit - the smallest piece of code that can be logically isolated in a system. In most programming languages, that is a function, a subroutine, a method or property. The isolated part of the definition is important. In his book "Working Effectively with Legacy Code", author Michael Feathers states that such tests are not unit tests when they rely on external systems: "If it talks to the database, it talks across the network, it touches the file system, it requires system configuration, or it can't be run at the same time as any other test."

Modern versions of unit testing can be found in frameworks like JUnit, or testing tools like [TestComplete](#). Look a little further and you will find SUnit, the mother of all unit testing frameworks created by Kent Beck, and a reference in chapter 5 of The Art of Software Testing . Before that, it's mostly a mystery. I asked Jerry Weinberg about his experiences with unit testing -- "We did unit testing in 1956. As far as I knew, it was always done, as long as there were computers".

Regardless of when and where unit testing began, one thing is for sure. Unit testing is here to stay. Let's look at some more practical aspects of unit testing.

## **Tools And Platform Used**

### ❖ **Front End**

✓ HTML, CSS, JavaScript, Bootstrap.

### ❖ **Back End**

✓ JSP, Servlet, MySQL, JDBC .

## **Future Scope Of Online Voting System**

Everything requires modification and new implementation according to need or due to other reason. In the following proposed project following areas can be implemented in future.

- It is connected with the network for easily retrieved data and many location or many districts or cities in different states.
- All the information can be easily accessed the Voter like their details, voting status, poll result.
- Report on the different basis will be easy created on the demand.
- It can be modify and the others details can be easily provided to administrator.
- Option for customizing environment.
- New security features. With its emphasis on a more strategic decision making process is fast gaining ground as a popular outsourced function.
